Known Issues.....	2

Changes

As part of our ongoing effort to fortify various stability measures being added throughout the application, the following modifications are being implemented:

- TD-21184. Takeoff Item Locks. When a user opens a Takeoff Item Properties window, that Item is locked to that user until the window is closed. No other user can open that Takeoff Item; however, another user may draw takeoff with that Item and/or all other Takeoff Items in the bid.
Additionally, while a user has a Takeoff Item Properties window open, another user cannot edit or delete any existing takeoff items from the bid.
- TD-21142. Bid Areas Locks. When a user opens the Bid Area dialog, the dialog is then locked to other users until the dialog is closed. No other users can open it, nor can they change the currently selected Bid Area.
- TD-21185 Typical Areas Locks. When a user has the Typical Areas dialog open, that dialog (and the Bid Areas dialog) are locked to other users until the dialog is closed. All buttons associated with Bid Areas and Typical Areas will be disabled until the initial user closes the dialog.

Known Issues

- If a Sheet no longer belongs to the Current Set in a bid because the Revision Page was deleted and the Original Page was deactivated, the takeoff and annotations done on the Revision Page do not get removed from the bid as expected and the totals on the Worksheet and Summary Tabs are incorrect.
 - **Workaround:** Activate/deactivate the Original Set
 - *** UPDATE:** Corrected for pages with takeoff. Work continues on pages with annotations as well.
